

The Systematic Liquidation

Subject: Natural Person versus Legal Entity

Author: Olivier Colle

Date: March 27, 2026

I. The Definition of the Natural Person

The natural person is the human being of flesh and blood. The sole source of consciousness, creativity, and moral compass.

- **The Source:** Rights and obligations stem directly from being human.
 - **The Initial Phase:** In its pure state, the human is sovereign and not subject to algorithmic control.
 - **The Goal:** Growth of human consciousness (*As Above, So Below*).
-

II. The Legal Entity: The Hacked Mask

The legal entity (rechtspersoon) is a legal fiction; a paper entity without soul or conscience that has become corrupted through systemic errors.

- **Hacking via Phishing & Vishing:** The vulnerability of the system is fueled by large-scale manipulation. According to reports in **HLN (27-03-2026)**, 1 in 20 citizens has become a direct victim of phishing or vishing.
 - **System-wide Compromise:**
 - **Belgium:** Based on the 1-in-20 ratio, over **590,000 Belgians** are victims of active manipulation of their digital identity.
 - **The Netherlands:** In the Netherlands, we are already speaking of approximately **8 million people** whose data and digital legal entity are considered compromised (partly due to the scale of the Odido data breach).
 - **The Liquidation:** When the data of the legal entity falls into the hands of malicious actors or gets stuck in corrupt algorithms, the natural person is held hostage. The system no longer recognizes the human being, only the (hacked) file number.
-

III. The Only Way Out: The Reset

The legal entity is irreparably damaged. The current administrative imprisonment, fueled by data leaks and unjustified fines, can only be broken by a return to the initial phase. This

requires the reinstallation of the natural person as the sole rightful authority, supported by a transparent and faultless system (Project 999).
